

AIGuide: An augmented reality hand guidance application for people with visual impairments

Presented By Nelson Daniel Troncoso Aldas

Report by: Akhter Al Amin(University ID: 350007619)

October 31, 2020

1 Summary

I like his way of organizing the presentation. He showed that how researchers can implement diary taking way to collect participants activity in an environment where participants are unable to report their activity. Overall I like his way of presentation and representing his work on this topic. One thing I did not like is his description of study regarding resolving different problems, instead it would more viable if he would show some animations instead of still images.
