Human Behavior Understanding from Large-scale video dataset

Presented By Yu Kong

Report by: Akhter Al Amin(University ID: 350007619)

October 10, 2020

1 Summary

His ground motivation behind this presentation were introducing audience with his research project. He showed the big picture pretty well which was helpful even for the people who did not have any background knowledge on his research. The topic was interesting and very timely. Hate speech is a crucial matter nowadays and he tried to classify those in social media through different models. Specially SVM, CNN and LSTM. I could not understand properly the application of LSTM in his project. Overall I liked the topic as well as presentation.
